

SUBJECT AND AUTHOR INDEX OF THE MONTHLY WEATHER REVIEW, 1905.

Prepared by FRANK OWEN SEETSON, Assistant Editor.

The Weather Bureau expects to publish a general index to the MONTHLY WEATHER REVIEW on the same general plan as the index below, and we should therefore be glad to receive criticisms and suggestions from those who use this annual index.

The meteorological elements most important in determining climate, such as temperature and precipitation, are entered under both the element and the locality, but the following are entered only under their respective headings, and not under the place: atmospheric electricity, droughts, earthquakes, evaporation, floods, fog, frost, lightning, meteors, optical phenomena, storms of all kinds, temperature of soil and water. Places in the United States are entered under the name of the State; in foreign countries, under the country.

If tables of observations contain but two subjects, e. g., pressure and temperature, each is indexed separately under its proper heading. Tables containing more than two subjects are entered but once (in addition to the entry under location),

Abbe, Cleveland.

Absurd explanation as to Indian summer, 407.
Apparatus for instruction in physics and meteorology, 15.

Piche evaporimeter, 1 p., 253.
Publication of thermograms in facsimile, 445.
Rainfall of Mexico, 1 p., 444.
Reorganization of meteorology in Australia, 323.
Robert August Billwiller, 400.
Scientific aeronautics, 1 p., 322.

under the general heading "Observations", except that the following items are indexed separately wherever they occur: auroras, evaporation, drought, fog, frost, halos, number of days with precipitation, ozone, radiation, snow, sunshine, temperature of soil and water, thunderstorms, and (under clouds) number of clear, partly cloudy, and cloudy days.

The letters *a, b, c, d*, refer to the 1st, 2d, 3d, and 4th quarters of the page, respectively. The length of articles covering more than one column is given to the nearest whole page. A star (*) preceding a page number shows that not more than three or four lines are devoted to the subject on that page. A dagger (†) indicates that the phenomenon described is especially noteworthy.

The following abbreviations are used: Q., "quoted"; p., "page" or "pages"; T. C., "Table of Contents", and for the calendar months, Ja., F., Mr., Ap., My., Je., Jy., Ag., S., O., N., D.—*F. O. S.*
